

Website Proposal — ARTS 104 Digital Art Portfolio

Website Name:

ARTS 104: My 3D Design Portfolio

Website Description

This website will be a digital portfolio showing my work and progress throughout ARTS 104: 3-Dimensional Design I. The website will document each of the four major projects I complete during the semester, including my research, idea boards, sketches, in-process photographs, finished artwork, and written work. The four class projects are Relics and Relief, Grain and Glow, Wired Wildlife, and Corrugated Campus. The website will also include a Personal Art Gallery where I can display artwork I create outside of class and artwork I have made in the past. Each project page will show the development of my artwork from the beginning idea through the finished piece. The website will use images and interactive features to make it feel like an online art portfolio and gallery. I think the use of slideshows would be really cool and I don't know what it's called or how it works but the way the <https://www.starrylemonlime.com> website works is really cool and I hope to add a feature like that.

Website Pages

1. Home

The home page will introduce the website and showcase selected artwork from the different pages. It will include an introduction, featured artwork, and links to the other sections of the website. A JavaScript slideshow could be used to display different pieces of artwork.

2. Relics and Relief

This page will document my first ARTS 104 project, which uses clay and ceramic sculpture. It will include my research, idea boards, sketches, planning, in-process photographs, finished sculpture, papers, and reflections. The project focuses on historical sculptural traditions, ancestry, identity, volume, and mass.

3. Grain and Glow

This page will document my wood sculpture project. It will include my ideas, sketches, maquette, light-source planning, color planning, in-process photographs, finished sculpture, and written work. The project involves creating a nonobjective plywood sculpture with an internal light source and focuses on craftsmanship, color theory, balance, and light.

4. Wired Wildlife

This page will document my wire and fabric sculpture project. It will include my ecosystem research, idea boards, blueprints, sketches, in-process photographs, fabric work, finished sculpture, and written reflections. The project involves creating a wall-mounted sculpture showing an animal or insect together with a coexisting plant or fungus.

5. Corrugated Campus

This page will document my cardboard sculpture project. It will include my research, photographs from observing the selected USC building or monument, architectural drawings, idea boards, construction photographs, surface and value studies, finished sculpture, and written work. The project involves creating a sculptural interpretation of a University of South Carolina building, sculpture, or monument using corrugated cardboard.

6. Personal Art Gallery

This page will showcase artwork that I create outside of ARTS 104 as well as artwork I have made in the past. It can include drawings, paintings, sculptures, digital artwork, sketches, or other creative projects. This page will allow me to show my interests and creativity beyond the required class assignments.
